Jakarta Barat, Indonesia (Current) | Trenggalek, East Java (Home)

I am a Bachelor of Information Systems graduate from Telkom University Surabaya with professional experience as a Full-stack Web and Mobile Developer. I have a proven track record in developing robust web-based systems using Laravel—including internal budget analysis applications for the Ministry of Tourism—alongside high-impact mobile solutions using Flutter for government public service Super Apps. I am proficient in applying MVC, GetX architecture, and Atomic Design principles to build structured, scalable, and high-performance applications while effectively translating complex business requirements into effective technology solutions. I am accustomed to working collaboratively in cross-functional teams and am committed to delivering high-quality development that meets strategic targets.

EDUCATION

Telkom Surabaya Institute of Technology	Surabaya
<i>Bachelor in Information Systems</i> GPA: 3.82 / 4.00	2021 - 2025
- MSIB Internship at Indi Teknocreasi Internasional (2024) - Student exchange at the Telkom Purwokerto Institute (2023) - Lab Assistant of Algorithms and Programming for Digital Business (2023) - Lab Assistant of Data Warehouse & BI for Digital Business (2023) - FINALIST on BIONIX College Level Information Systems Expo ITS (2022)	

WORK EXPERIENCE

Kementerian Pariwisata	Jakarta Pusat
<i>Full-stack Web Developer Intern</i>	Desember 2025 – Juni 2026
- Develop and maintain the ANARA (Analisis Anggaran dan Rencana Kegiatan) web application using Laravel, resulting in a 20% increase in bureaucratic efficiency and budget transparency. - Build robust backend functionalities to ensure 100% data accuracy in budget planning and internal activity reports for ministry-wide operations. - Collaborate with internal stakeholders to translate functional requirements into digital solutions, achieving ~90% alignment between technical features and organizational needs.	

PT. Pompa DEX Indoguna	Surabaya
<i>Mobile Developer Intern</i>	July 2025 – November 2025
- Developed the company’s internal mobile applications using Flutter for both Android and iOS platforms. - Upgraded the FloodViser application using Flutter, resulting in a 35% increase in app performance and 40% reduction in crash frequency across Android & iOS. - Implemented GetX for state management, improving workflow efficiency and reducing state-related bugs by 25%. - Developed the Sparkling application from scratch, achieving 80% cross-platform code reusability between Android and iOS. - Refactored core modules using MVC and Atomic Design, improving code readability by 30% and decreasing rework time by 20–25%. - Collaborated with IT and stakeholders, increasing alignment between feature requirements and business needs by ~90% accuracy in each iteration.	

Telkom Indonesia	Online
<i>Freelance Mobile Developer</i>	June 2025 – November 2025
- Developing a Super App for the Government of Sidoarjo City using Flutter for Android and iOS. - Implementing GetX architecture to improve state management, reducing app load times by up to 40% and enhancing performance. - Applying MVC and Atomic Design principles to increase code readability (+30%) and decrease bug-related rework (–25%). - Ensuring cross-platform code reusability (80%+ between Android and iOS) for faster development cycles. - Collaborating with stakeholders from Telkom and the local government to align app features with public service needs.	

Indi Teknokreasi Internasional	Jakarta Timur
<i>Mobile Developer Intern</i>	January 2024 – July 2024
- Developed "GetCrew" using Flutter for Android and iOS, achieving a 30% increase in user satisfaction. - Contributed to cross-platform development, ensuring over 80% code reusability between Android and iOS. - Transitioned the GetCrew codebase to GetX architecture, reducing app load times by 40% and enhancing overall performance. - Refactored GetCrew with MVC and atomic design, increasing code readability by 30% and reducing bug-related rework by 25%.
